

# Mawer Global Balanced Fund, Series A

## Q3 2024 | Performance Commentary

### Market Overview

In the third quarter of 2024, under the weight of previous central bank interest rate increases, global growth continued to slow. In September, the U.S. Federal Reserve made its first interest rate cut this cycle, joining the Bank of Canada and other central banks who had already begun reducing rates due to retreating inflation. While the path of inflation and interest rates are never certain, we are now on the easing side of this cycle.

Equity market performance broadened out over the third quarter with interest rate sensitive sectors performing well, helping to propel several stock market indices to all-time highs. The information technology sector lagged, as investors questioned higher valuations for companies benefiting from artificial intelligence spending. Continued exuberance across several equity markets may suggest that investors have priced in a low probability of a recession.

Regionally, Chinese stimulus announcements provided an end of period share price rally for the country, despite lingering longer-term economic challenges. Canadian bonds also rallied this quarter as interest rates declined.

### Performance summary

The portfolio underperformed the benchmark over the quarter as the global equity holdings underperformed the MSCI ACWI Index (Net) in the period.

Overall, we would characterize the current market as exuberant—the market, as defined by the MSCI ACWI Index (Net) is up around 32% over the past year. This type of outlier performance in the market, with extremely narrow leadership and strong momentum, is typically an environment where our quality at the right price investment style is challenged to keep pace. Insurance broker **Marsh & McLennan's** performance of +18% over the past year is an example of a “boring” company that has done well, but not kept pace with the market leaders. And given the magnitude of the underperformance of our equity holdings over the past 12-months, this has impacted more medium-term results.

We have been here before with our global equity strategy, both in 2016 with the aggressive rally after President Trump's election victory and in late 2020 when the COVID-19 vaccines were approved and rolled out causing a pop in lower quality businesses. In both cases, we stuck to our philosophy and process and clients were ultimately rewarded with strong bounce backs in performance. We always try to balance sticking with the plan with continuous improvement.

The more recent performance of our equity holdings seemed in-line with our expectations earlier in the quarter: we outperformed in late July/early August where the macro-economic situation appeared more precarious and underperformed later in the quarter as the market started pricing in a goldilocks scenario. We feel that the equity portfolio is resilient and well set up for a multitude of alternative scenarios.

The standout performers in the third quarter were all steady, defensive portfolio stalwarts across a range of sectors. “Be boring” investments and many of our top holdings such as insurance broker **Aon**, recurring consumables distributor **Bunzl**, health insurer **UnitedHealth Group**, and IT consultant **CGI** appreciated on investor-pleasing results that suggest our long-term investment theses remain intact. In Aon’s case, the results were welcome given that strong organic growth and a positive impact from recently acquired NFP helped to allay concerns that had weighed on the stock earlier in the year. In Japan, telecom **KDDI**, enjoyed a significant bump after lagging earlier in the year. KDDI is a domestically focused business; as a result, North American investors further benefitted from the significant appreciation of the Japanese yen.

Ultimately though, it was a quarter where a few stocks really drove our relative underperformance of the equity holdings. In particular:

- **Moderna** – stock was down sharply on lower sales guidance due to weaker demand for its COVID-19 vaccine. Our thesis has always been predicated primarily on the company’s R&D platform, with its focus on scalability and learning speed corroborated by their pipeline of drugs that are in development (47 development programs, 9 in late-stage trials). That remains the case today though we do acknowledge the near-term headwinds from the slowing COVID-19 franchise.
- **Novo Nordisk** – the stock sold off this quarter on increasing regulatory risk concerns and ongoing market share losses to competitors but is still up 30% over a one-year period. We have been taking profits along the way for more than three years now. We continue to hold a position in the company due to its focused approach to drug pipeline development, high calibre of scientists, and economies of scale in R&D and commercialization.
- **FedEx** – after an excellent Q2 earnings thanks to evidence that their cost cutting program was on track, the stock dropped after Q3 earnings that showed weaker business-to-business volumes (particularly in the U.S.) and mix shift from priority to deferred services. Our investment case remains intact with meaningful potential earnings improvements from self-help initiatives and focus on improving ROIC—which new management is now incented on—alongside embedded optionality in spin-off of its leading less-than-truckload freight business.
- **BMW** – the company materially cut its 2024 guidance due to a large one-time vehicle recall related to faulty braking systems and economic malaise of the Chinese consumer. We continue to like the company because of its leading premium/luxury brand position,

reoccurring elements of the business including customer loyalty rates and captive financing, and an attractive valuation and cash back yield supported by a robust balance sheet.

## Looking Ahead

While corporate earnings remain on an upward trajectory, many of the world's economic engines such as the U.S. and Europe are slowing with PMI data declining across the globe. Further, there are signals that the U.S. consumer might be facing headwinds. As an example, a meaningful slowdown in the auto sector, which is a significant driver of manufacturing activity and jobs in the West, doesn't portend well for aggregate demand. While central banks should be commended for their handling of the economy over the last two years, investors may be placing too high a probability on a "no landing" scenario.

On the other hand, speaking of central banks, the denominator impact of lower rates and the start of the easing cycle should generally be supportive of risky assets on the assumption that inflation is falling for the right reasons and not due to more worrisome deflationary forces. The most recent stimulus in China is a great example of the impulse and impact to sentiment that this denominator effect can provide. "Don't fight the Fed" has been a rather prudent mantra historically.

Looking ahead, there will undoubtedly be no shortage of events to preoccupy markets; war and the upcoming U.S. election spring immediately to mind. This is why "Prepare, don't predict" is such an important mindset at Mawer and lies at the heart of our investment process. Investing in a diversified portfolio of real businesses with strong competitive advantages, that generate recurring revenues, that have flexibility in their cost base, that maintain dominant industry positions, that are run by competent managers, and that refrain from taking undue risk from a leverage perspective, should lead to genuine wealth creation. While market sentiment can shift quickly and unpredictably in the short-run, attractive risk-adjusted returns over the long-term is the real goal.

## Performance Summary<sup>1</sup> (%)

### As of September 30, 2024

|           | YTD  | 3 Mo. | 1 Yr. | 3 Yrs. | 5 Yrs. | 10 Yrs. | Since Inception <sup>2</sup> |
